DETAILED ACTION

Claim Rejections - 35 USC § 102

Response to Arguments

1. Applicant's arguments with respect to claims 1-32 have been considered but are moot in view of the new ground(s) of rejection.

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-32 are rejected under 35 U.S.C. 102(e) as being anticipated by Maruyama et al. (Maruyama) (US 5,126,795).

Maruyama either explicitly or inherently teaches all of the circuitry of claims 1- 32 as evidenced by the fact that Maruyama discloses an image forming method a memory stores the high level picture signals and where the picture on the original document is separated into a black color element and a red color element, and these are respectively developed by the black toner and red toner. It is also possible to obtain the copied picture combining desired colors by changing the color of the toner used in each developing device. The black picture may be developed by a blue toner. Moreover, optical filter 508 may be changed to filter another color. Also, if the signal of the color element extracted from the picture signal can be selected freely in signal processing circuit 522 and the colors of the toners in developing devices 511 and 514

can be selected freely, not only the original document of double-color of black and red but also a double-color document of black and blue or black and green can be chosen. (see col 29, line 17 – col 31, line 51).
